

Zomeworks

Universal Track Rack

Tracking can increase electrical output of modules by 25% over that of a fixed rack. The sun's heat moves liquid from side to side, allowing gravity to turn the Track Rack and follow the sun. Tracking mounts are cost-effective components for domestic and industrial photovoltaic power systems, water pumping systems, cathodic protection systems, and utility applications. The UTR comes in 6 standard sizes for holding 2 to 16 modules and accommodates most PV modules. The numeric values in each model number refer to the square feet of module space on that rack (i.e. UTRK040 has 40 sq. ft. of module space). All Zomeworks racks are guaranteed for 10 years.
